

»»» HydraBoost PTO Pump

- Available in 6 sizes - 12, 16, 20, 24, 32, or 40 GPM capacities
- The unique PumpDoctor mounting bracket is included with every HydraBoost purchase
- Unit is assembled and ready to mount
- No drop in vacuum pressure when planter is lifted
- Pressure compensating variable displacement pump allows tractor speed to vary, yet hydraulic pressure remains constant to hydraulic functions
- Accommodates Bulk Fill Fans, Vac Fans, DeltaForce, Compressors & Alternators
- Allows older MFWD and 4WD tractors to operate newer vac planters

Our pressure compensating pumps used on all HydraBoost units allow for seamless changes in flow requirements. The flow self-adjusts to match intermittent usage items, such as compressors, without interruption of other hydraulic functions.

Precision Dealers are our Dealers

Precision add-ons mean more hydraulic requirements from the tractor. More hydraulic requirements shouldn't mean your customers are forced to upgrade tractors as the only solution. Though the HydraBoost, we make precision add-ons more affordable for growers and thus grow dealers' business exponentially.

Please call today to get set up as a HydraBoost Dealer!
