

HydraBoost

Add Up To 40 GPM Of Hydraulic Flow To Any Tractor

COMMAND
HYDRAULICS™

The HydraBoost is a self-contained auxiliary hydraulic supply package powered by a pressure-compensating hydraulic PTO pump. It has been designed to mount to any planter and tractor on the market, while adding up to 40 GPM of capacity and 4-6 more hydraulic ports.

»» HydraBoost PTO Pump

- Available in 6 sizes - 12, 16, 20, 24, 32, or 40 GPM capacities.
- The unique PumpDoctor mounting bracket is included with every HydraBoost Purchase.
- Unit is assembled and ready to mount.
- No drop in vacuum pressure when planter is lifted.
- Pressure compensating variable displacement pump allows tractor speed to vary, yet hydraulic pressure remains constant to hydraulic functions.
- Accommodates Bulk Fill Fans, Vac Fans, DeltaForce, Compressors & Alternators.
- Allows virtually any tractor with PTO to run newer Bulk-Fill Planter.

Our pressure compensating pumps used on all HydraBoost units allow for seamless changes in flow requirements. The flow self-adjusts to match intermittent usage items, such as compressors, without interruption of other hydraulic functions.

Precision Add-Ons

Precision add-ons mean more hydraulic requirements from the tractor. Increasing hydraulic requirements shouldn't mean upgrading tractors is the only solution. The HydraBoost puts money back in your pocket by allowing you to run the latest precision technology without the additional cost of upgrading tractors.
